1. Safety Precautions

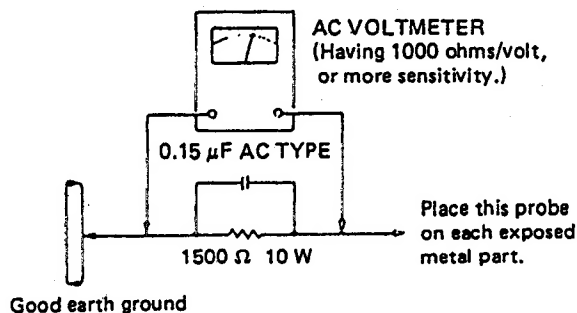

1. The design this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacture's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety — related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of service manual. Electrical components having such features are identified by () on the schematic diagram and parts list in the service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of service manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after reassembling.
5. Leakage current check (Electrical shock hazard testing)

After re — assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock. Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. using a "Leakage current tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC(r.m.s.)

• Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 ohms 10W resistor paralleled by a 0.15 μ F AC type capacitor between an exposed metal part and a known good earth ground. Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75V AC(r.m.s.). This corresponds to 0.5mA

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

2. Safety precaution about PC – X105

■ Important Management Points Regarding Safety

★ PC – X105J ONLY

Full Fuse Replacement Marking

Graphic symbol mark (This symbol means fast blow type fuse.)

should be read as follows:

FUSE CAUTION

**F998 : FOR CONTINUED PROTECTION AGAINST RISK
OF FIRE, REPLACE ONLY WITH SAME TYPE 5 – A,
125 – V FUSE**

1. Before installation confirm the fuse capacity indication, (UL) and CSA marks on the fuse capacity when installing confirm if the fuse is held tightly with the fuse holder.

2. Concerning the fuse caution, letter written in English and French must be confirmed.

★ PC – X105 C ONLY

Full Fuse Replacement Marking

Graphic symbol mark (This symbol means fast blow type fuse.)

should be read as follows:

FUSE CAUTION

**FOR CONTINUED PROTECTION AGAINST RISK
OF FIRE, REPLACE ONLY WITH SAME TYPE AND
RATING OF FUSE(S).**

F998 : 5A /125V

F996 : 5A/125V

★ PC – X105 C SEULEMENT

Marquage Pour Le Remplacement Complet De Fusible

Le symbole graphique (Ce symbole signifie fusible de type à fusion rapide.)

doit être interprété comme suit:

PRECAUTIONS SUR LES FUSIBLES

**POUR ASSURER UNE PROTECTION CONTINUE
CONTRE LES RISQUES D'INCENDIE, REMPLACEZ
UNIQUEMENT PAR UN (DES) FUSIBLE(S) DU MÊME
TYPE ET DE MÊME AMPÉRAGE.**

F998 : 5A/125V

F996 : 5A/125V

3. •Power transformer marking

: UL Approved number (71F148HD)/PC – X105J

: Parts number (FMTP57A2 – 12A) /PC – X110C

•The torque of the screw driver for the power transformer must be controlled.

4. Concerning the AC socket, the next marking must be confirmed and to avoid printed circuit board pattern damage, the ACsocket must not float from print circuit board.

Marking ; HSC1566(PC – X105J)

HSC1466(PC – X105C)

5. Concerning the primary terminal and the adjacent secondary terminal on the printed circuit board to provide proper creeping and spatial distance, solder must not protrude from soldering round.

6. The parts on the pattern side of the print circuit board must be fixed with spacers or bond.

7. Wires must be clamped or secured at the locations shown in the figure so that the wire do not touch to live parts moving part, hot part, or sharp edges.

8. Following parts are controlled as the heated parts. confirm that the flammable parts are lifted up the parts in () must be controlled.

D996, D997, D998, D999, (IC101)

9. The single wire on the printed circuit board must be fixed with spacer or bond.

10. Confirm the following parts specified in the UL and CSAreports.

UL C301 Vent type

CSA No confirm

IMPORTANT FOR LASER PRODUCTS (For U.S.A. only)

PRECAUTIONS

1. CLASS 1 LASER PRODUCT

2. **DANGER:** Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.

3. **CAUTION:** Do not open the rear cover. There are no user serviceable parts inside the unit; leave all servicing to qualified service personnel.

4. **CAUTION:** The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent the emission of radiation when the CD holder is open. It is dangerous to defeat the safety switches.

5. **CAUTION:** Use of controls for adjustments and the performance of procedures other than those specified herein may result in exposure to hazardous radiation.

6. **CAUTION:** The laser is able to function, if safety switches out of function. The laser light is invisible, avoid exposure, do not disassemble the laser unit, but replace the complete unit.

IDENTIFICATION LABEL AND CERTIFICATION LABEL

NAME/RATING PLATE

Notes:

*1 The date of manufacture.

*2 The ID code of manufacturing plant.

3. Main Features

1. **One-touch operation (COMPU PLAY) (only when AC power is used)**
 - When a source button (CD, tape, or tuner) is pressed, the unit's power is turned on and initiates playback even when the power is set to STANDBY.
2. **Multi-function CD player.**
 - CD player with programmed play of up to 20 tunes/ repeat play function.
 - 8-cm (3-3/16") "CD singles" capability.
3. **Multi-Bass Horn circuit for low-frequency sound reproduction.**
4. **2-Band digital synthesizer tuner with 30-station (15 FM and 15 AM) preset capability**
 - Seek/manual tuning
 - Auto preset tuning
5. **Synchro-record start for CD recording convenience.**
6. **Double-cassette mechanism (Deck A for recording and playback, Deck B for playback).**
 - Metal and CrO₂ tapes can be played back for superior tone quality.
 - Synchro-start dubbing function (normal/high speed dubbing).
 - Relay playback (from Deck B to Deck A).

4. Specifications

Compact disc player section

Type	: Compact disc player
Signal detection system	: Non-contact optical pickup (semiconductor laser)
Number of channels	: 2 channels (stereo)
Frequency response	: 20 Hz – 20,000 Hz
Signal-to-noise ratio	: 76 dB
Wow & flutter	: Less than measurable limit

Radio Section

Frequency range	: FM 87.5 – 108 MHz AM 530 – 1,710 kHz
Antennas	: Telescopic antenna for FM Ferrite core antenna for AM

Tape deck Section

Track system	: 4-track 2-channel stereo
Motor	: Electronic governor DC motor for capstan
Heads	: Deck A: Hard permalloy head for recording/playback, magnetic head for erasure Deck B: Hard permalloy head for playback
Frequency response	: 63 – 12,500 Hz (with normal tape/normal speed)
Wow & flutter	: 0.15% (WRMS)
Fast wind time	: Approx. 120 sec. (C-60 cassette)

General

Power output	: 4.2 watts per channel, min RMS, at 3 ohms from 80 Hz to 15 kHz with no more than 10% total harmonic distortion (PC-X105J) Max. 15.4 W (7.7 W + 7.7 W) at 8 Ω (PC-X105C)
Output terminals	: PHONES x 1 [Output level: 0 – 12 mW/32 Ω, Matching impedance: 16 Ω – 1kΩ] SPEAKER OUTPUT x 2 Matching impedance: 3 Ω–16 Ω

Power supply	: AC 120 V, 60 Hz DC 12 V ("D" cells x 8)
Power consumption	: 28 W (with POWER SW ON) 2.2 W (with POWER SW STANDBY)
Dimensions	: 683 (W) x 252 (H) x 233 (D) mm (26-7/8" x 10" x 9-3/16") including knobs
Weight	: Approx. 7.5 kg (16.6 lbs) with batteries Approx. 6.7 kg (14.8 lbs) without batteries
Accessories provided	: AC power cord

Speaker Section (each unit)

Speakers	: 10 cm (3-15/16") x 1
Impedance	: 3 Ω
Dimensions	: 170 (W) x 235 (H) x 202 (D) mm (6-3/4" x 9-5/16" x 8")
Weight	: Approx. 1.3 kg (2.9 lbs)

Design and specifications are subject to change without notice.

5. Instructions (Extract)

NAMES OF PARTS AND THEIR FUNCTIONS

• Top and front panels

- ① Disc holder
- ② Disc holder open button (Δ)
- ③ CD operation buttons
 - ① REPEAT button
 - ② SEARCH/SKIP (◀◀/▶▶) buttons
 - ③ MEMORY/CALL button
 - ④ PLAY/PAUSE (▶||) button
 - ⑤ STOP/CLEAR (□) button
- ④ Display window (CD player section)
 - ① Playback time display
 - ② PROGRAM mode indicator
 - ③ Repeat playback indicator (≡ ALL)
 - ④ Function/Track number display
- ⑤ POWER button
- ⑥ PRESET TUNING button
- AUTO PRESET button
- ⑦ MEMORY button
- ⑧ BAND/FM MODE button
- ⑨ TUNING buttons
 - DOWN frequency
 - UP frequency
- ⑩ VOLUME buttons
 - +: Use to increase the volume or tone (BASS/TREBLE).
 - : Use to decrease the volume or tone (BASS/TREBLE).
 - (The level can be changed from VOL 0 to VOL 25.)

11 Multi-Bass Horn button

- on: The Multi-Bass Horn indicator will light.
Set to this position to listen to the Multi-Bass Horn sound
off: The Multi-Bass Horn indicator goes out.
Set to this position when the Multi-Bass Horn sound is not required.

12 Multi-Bass Horn indicator

13 Display window

- (Tuner section)
Band indicator (FM/AM)
Radio frequency display
MONO indicator
STEREO indicator
Preset station display
(Tape deck/amplifier section)
Tape mode display
CrO₂/METAL tape indicator
NORMAL speed indicator
HIGH speed indicator
Recording indicator (REC)
MULTI-BASS indicator

14 BASS/TREBLE button

- Used to select BASS or TREBLE to be adjusted with the VOLUME button. (The level setting ranges are from -6 to 6.)

15 TAPE (FOR PLAYBACK) switch

- Set this switch according to the type of tape to be used.
CrO₂-METAL: (playback only)
Set to this position to listen to a chrome (type II) or metal (type IV) tape.

NORMAL:

- Set to this position to listen to a normal (type I) tape. The "normal tape" indicator is not indicated in the display window.

16 DUBBING SPEED switch

HIGH:

- Set to this position when dubbing at high-speed.

NORMAL:

- Set to this position when dubbing at normal-speed.

17 Cassette holder (Deck A)

18 Cassette operation buttons (Deck A)

○ REC:

- Press this button with the ► PLAY button to start recording.

► PLAY:

- Press to play the tape.

◀◀ REW:

- Press to rewind the tape rapidly.

▶▶ FF:

- Press to wind the tape forward rapidly.

■/▲ STOP/EJECT:

- Press to stop the tape. Pressing this button when the tape has stopped opens the cassette holder.

|| PAUSE:

- Press to stop the tape momentarily. Press again to release the pause mode.

19 Cassette holder (Deck B)

20 Cassette operation buttons (Deck B)

► PLAY:

- Press to play the tape.

◀◀ REW:

- Press to rewind the tape rapidly.

▶▶ FF:

- Press to wind the tape forward rapidly.

■/▲ STOP/EJECT:

- Press to stop the tape. Pressing this button when the tape has stopped opens the cassette holder.

● Rear Panel

- ① **SPEAKER terminals**
Connect the provided speakers to these terminals.
- ② **Battery compartment cover**
- ③ **Headphones Jack (PHONES) (3.5 mm dia. stereo mini)**
Connect headphones (impedance 16 Ω - 1 k Ω) to this jack. The speakers are automatically switched off when the headphones are connected.
- ④ **AC IN (AC Input) jack**
- ⑤ **Telescopic antenna**

SWITCHING THE POWER ON/OFF

COMPU PLAY (only when AC power is used)

Even when the power is set to **STANDBY**, pressing the button shown below switches on the power and selects the source.

	Function mode	Operations
	CD	When this button is pressed with a CD loaded, CD playback begins.
Deck A or Deck B 	TAPE	When this button is pressed with a CD loaded, CD playback begins.
	TUNER	When this button is pressed, the tuner is engaged.

ATTACHING/DETACHING THE SPEAKERS

When using the speakers attached to the main unit
Hold with the bottom of the speaker against the top of the main unit and press down on the speaker to attach it.

Press the speaker down with the speaker and main unit aligned.

Note:

Since the speakers sound differently according to where they are placed, carefully place them for optimal effect within the length of the provided speaker cords. It is recommended that the left and right speakers be placed symmetrically in relation to the main unit.

When using the speakers detached from the main unit
Lift the speaker up to detach from the main unit by pressing the lock lever at the rear bottom of speaker in the direction of the arrow.

CONNECTIONS

- Do not switch the power on until all the connections are completed.

* After connecting the speaker cords, bundle any slack into the space for the speaker cords in the rear panel.

- When connecting the speaker cords, connect the one marked with a line to the "-" terminal first.

PLAYING COMPACT DISCS

Playing an entire disc ... The following example assumes a compact disc with 12 tunes and a total playing time of 48 minutes 57 seconds.

Operate in the order shown

- ① Set the POWER button to on.
 - ② Press to open the Disc holder.
 - ③ Load a disc with the label side facing up and close the Disc holder.
 - ④ Set to the CD mode.
 - If the PLAY button of deck A or B is pressed, press the STOP/EJECT (■/▲) button to set to the stop mode.
 - When a CD is first loaded, the total number of tracks (tunes) and total playing time are displayed.
 - ⑤ Press to start play.
 - As tunes are played, their track numbers go out one by one.
- 8-cm (3-3/16") compact discs can be used in this unit without an adapter.

To adjust BASS/TREBLE

Press the BASS/TREBLE button to select BASS or TREBLE to be adjusted. Within about 5 seconds, press the VOLUME button (+/-) to adjust the level within a range of -6 to 6. (Level should be adjusted in BASS or TREBLE.)

To stop play

- **To stop in the middle of a disc**
During playback, press the STOP/CLEAR (□) button to stop play.

- **To stop a disc temporarily**
Press the PLAY/PAUSE (▷||) button to stop play temporarily. When pressed again, play resumes from the point where it was paused.

Caution:

- To change discs, press the STOP/CLEAR (□) button; check that the disc has stopped rotating completely before unloading it.

Notes:

- The following indication may be shown when a disc is dirty or scratched, or when the disc is loaded upside down.
In such a case, check the disc and insert again after cleaning the disc or turning it over.

- **Do not use the unit at excessive high or cold temperatures. The recommended temperature range is from 5°C (41°F) to 35°C (95°F).**
- After playback, unload the disc and close the Disc holder.
- If mistracking occurs during play, lower the volume.
- Mistracking may occur if a strong shock is applied to the unit or if it is used in a place subject to vibrations (i.e. in a car travelling on a rough road).

Skip playback

- During playback, it is possible to skip forward to the beginning of the next tune or back to the beginning of the tune being played or the previous tune; when the beginning of the required tune has been located, play starts automatically.

To listen to the next tune ...

Press the ►► button once to skip to the beginning of the next tune.

To listen to the previous tune ...

Press the ◀◀ button to skip to the beginning of the tune being played back and press again to skip to the beginning of the previous tune.

Search playback (to locate the required position on the disc)

- The required position can be located using fast-forward or reverse search while playing a disc.

- Hold down the button; search play starts slowly and then gradually increases in speed.
- Since low-volume sound (at about one quarter of the normal level) can be heard in the search mode, monitor the sound and release the button when the required position is located.

Programmed play

- Up to 20 tunes can be programmed to be played in any required order.
The total playing time of programmed tunes is displayed (up to 99 minutes, 59 seconds).
(Example: When programming the 2nd tune to be played first, and the 6th tune next, etc.)

Press twice.

Press four times.

- ① Press the STOP/CLEAR (□) button.
- ② Press the MEMORY/CALL button to set to the programming mode.
- ③ Press to designate the required track number.
- ④ Press the MEMORY/CALL button.
- ⑤ Designate the remaining tunes by pressing the ►► button.
- ⑥ Press the MEMORY/CALL button.
- ⑦ Press the ►► button when programming is completed. Programmed playback starts.

To clear the programmed tunes ...

Press the STOP/CLEAR (□) button before playing a disc. During programmed playback, press this button twice. When the Disc holder is opened, programmed tunes are cleared automatically.

To confirm the details of a program ...

Press the MEMORY/CALL button for more than 2 seconds; the tunes making up the program will be displayed in programmed order.

Notes:

1. If the total playing time of the programmed tunes exceeds 99 minutes 59 seconds, the total playing time indication will go out.
2. Programming of track (tune) number 21 or more is impossible.

Repeat play

Press the REPEAT button before or during play. A single tune or all the tunes can be repeated.

Whether a single tune or all tunes are to be repeated can be specified. Each time the REPEAT button is pressed, the mode will change from a single tune (◁), to all the tunes (◁ ALL), to the clear mode, in this order.

- **Repeat playback of a single tune (◁)**
The tune being played back will be heard repeatedly.

- **Repeat playback of all tunes (◁ ALL)**
When playing back an entire disc or programmed tunes, all tunes or the programmed tunes will be heard repeatedly.

CASSETTE PLAYBACK

(The example shows Deck A)

Operate in the order shown

- ① Set the POWER button to on.
- ② Load a cassette tape in Deck A.
- ③ Set the TAPE switch as required.
- ④ Press to start playback.
- ⑤ Adjust the volume and tone.

• **Playback in Deck B**

The previous procedures ③ through ④ also apply to Deck B when a cassette is loaded in Deck B. When Decks A and B are simultaneously set to the play mode, only the playback sound of Deck B is heard.

Notes:

1. When the power is turned off while the tape is still running, cassette operation buttons which are depressed do not return to the original positions. Press the STOP/EJECT (■/▲) button to stop the tape running before turning off (STANDBY) the power.
2. Avoid operating the FF or REW button on the deck during playback of the other deck.

RELAY PLAYBACK

(From Deck B to Deck A)

Operate in the order shown

- ① Set the POWER button to on.
- ② Load a cassette tape in Deck B.
- ③ Load a cassette tape in Deck A.
- ④ Set the TAPE switch as required.
- ⑤ Press the ► PLAY button on Deck B.
- ⑥ Set Deck A to the play-pause mode.

When Deck B stops, Deck A's pause mode will be released and it will start playback. When Deck A stops automatically, relay playback will be released.

Note:

Use the same type of tape in Decks A and B during this mode.

RADIO RECEPTION

Operate in the order shown

- ① Set the POWER button to on.
- ② Press the BAND/FM MODE button; a band and radio frequency will be shown in the display.
 - If the PLAY (▶) button of the deck is pressed, press the STOP/EJECT (■/▲) to set to the stop mode.
- ③ Select the band/FM mode (FM auto, FM MONO or AM).
- ④ Tune to the required station.

FM MODE button

Auto mode:

Set to this position when listening to or recording an FM stereo broadcast. The STEREO indicator lights when an FM stereo broadcast is received.

MONO:

Set to this position when FM stereo reception is noisy. When another station is tuned to in the MONO mode using the TUNING UP/DOWN or PRESET TUNING/AUTO PRESET button, the unit automatically enters Auto mode.

• Seek tuning

Press the UP or DOWN button for one second or more; the unit enters the seek tuning mode and tunes to higher or lower frequencies, and when the broadcast is received, it stops tuning automatically and the broadcast can be heard.

• Manual tuning

Each time the UP or DOWN button is pressed, the unit steps through the current frequency band. Tuning is in steps of 100 kHz for FM and 10 kHz for AM.

Notes:

- When seek tuning to the required station is not possible because it is broadcasting too weak a signal, press the UP or DOWN button momentarily to perform manual tuning.
- When the power is set to STANDBY, or another mode (TAPE or CD) is selected, the last tuned frequency is stored in memory. When the power is switched on again and BAND/FM MODE button is pressed, the same station will be heard.

Auto preset tuning

This function scans the current band (FM or AM), detecting frequencies used to broadcast signals, and stores the first 15 frequencies in memory automatically.

- Press the AUTO PRESET button for more than 2 seconds. The frequencies of stations broadcasting signals can be preset automatically in the order of increasing frequency. (15 stations in each band (FM and AM).)

Presetting stations

15 stations in each band (FM and AM) can be preset as follows:

- Example (when presetting an FM station broadcasting at 103.5 MHz to preset button "15")

- ① Press the BAND/FM MODE button.
 - ② Select the FM band using the BAND/FM MODE button.
 - ③ Tune to the required station.
 - ④ Press the MEMORY button.
 - ⑤ Set the preset station "15". (When "15" blinks in the preset station display.)
 - ⑥ Press the MEMORY button so that an FM station broadcasting at FM 103.5 MHz will be preset to preset station 15.
- Repeat the above procedure for each of the other stations, using a different preset button each time.
 - Repeat the above procedure for the AM band.

• To change preset stations

Perform step ④ above after tuning to the required station.

Notes:

- The previous preset station is erased when a new station is set as the new station's frequency replaces the previous frequency in memory.

Preset tuning

- The stations must be preset before this operation can be performed.
- ① Press the BAND/FM MODE button.
- ② Select the band (FM or AM) using the BAND/FM MODE button.
- ③ Press the PRESET TUNING button to select the required preset station (P-1–P-15).
- The preset station number and frequency are shown in the display in sequence each time the PRESET TUNING button is pressed.

Using the antennas

FM

AM

Note:

The built-in ferrite core antenna can pick up interference from television receivers in the neighborhood and thereby disturb AM reception.

RECORDING

- In recording, the ALC circuit automatically optimizes the recording level; adjustment of the recording level is unnecessary.
- Check that the safety tab on the cassette tape is not broken off.

Notes:

1. The recording characteristics of this unit are those of normal tape. Normal tape has different characteristics from CrO₂ and metal tapes.
2. Do not operate any button on deck B during recording.

It should be noted that it may be unlawful to re-record pre-recorded tapes, records, or discs without the consent of the owner of copyright in the sound or video recording, broadcast or cable programme and in any literary, dramatic, musical, or artistic work embodied therein.

Synchronized recording with the CD player

- In this system, the CD player starts playback when Deck A enters the recording mode.

Operate in the order shown

- ① Load a cassette tape in deck A.
- ② Load a disc and close the Disc holder.
- ③ Set the CD mode.
 - When the ► PLAY button of deck is pressed, press the STOP/EJECT (■/▲) button to set to the stop mode and perform this operation.
- ④ When programmed playback is required, program the required tunes. (See page 21.)
 - Select tunes with a total playing time which does not exceed the tape length.
- ⑤ Press the ○ REC button with the ► PLAY button; synchronized recording will start.

- Non-recorded sections of approx. 4 seconds are automatically left between tunes.
- When the tape reaches the end first, the CD player stops automatically; when the CD player stops first, the tape continues running. In this case, press the ■/▲ STOP/EJECT button to stop the tape.
- **When automatic spacing between tunes is not required ...**
Perform the following after finishing the previous operation (① to ④).
 - ① Press the ►|| PLAY/PAUSE button of the CD player twice. The CD player enters the pause mode.
 - ② Press the ○ REC and ► PLAY buttons simultaneously. Now, the CD player starts playback simultaneously.

Note:

To record a compact disc, be sure to check that the track (tune) number and playing time are displayed on the display window before pressing the ○ REC button and ► PLAY button.

DUBBING (SYNCHRO START DUBBING)

Normal and high-speed dubbing can be done from Deck B to Deck A.

Operate in the order shown

- ① Load a cassette tape in deck A. (Refer to the note on page 31.)
- ② Load a pre-recorded cassette tape in deck B.
 - Slightly press the ► PLAY button to set to TAPE mode. (The button should not be locked.)
- ③ Set to NORMAL SPEED or HIGH SPEED.
- ④ Set to correspond to the type of tape in Deck B.
- ⑤ Press the || PAUSE button.
- ⑥ Press the ○ REC button with the ► PLAY button. (Record-pause mode.)
- ⑦ Press the ► PLAY button. (Synchronized dubbing will start.)

Notes:

1. Television receivers placed close to this unit may cause interference on the recorded signal when this unit is used in the high-speed dubbing mode. If this happens, either turn off the television receiver or use the normal-speed dubbing mode.
2. With Deck A in the record-pause mode, the || PAUSE button is released when Deck B enters the stop mode.

Recording from the radio

Operate in the order shown

- ① Load a cassette. (Deck A)
 - ② Press the BAND/FM MODE button.
 - ③ Tune to the required station.
 - ④ Press the ○ REC button with the ► PLAY button.
- To stop recording temporarily, press the || PAUSE button. To resume recording, press the || PAUSE button again.

Erasing

When recording on a pre-recorded tape, the previous recording is automatically erased and only the new material can be heard when the tape is played.

To erase a tape without making a new recording ...

Slightly press the ► PLAY button of the deck to set to the TAPE mode and press the ○ REC and ► PLAY buttons together after pressing the ■/▲ STOP/EJECT button.

POWER SUPPLY

A. Operation on household AC

- Connect the AC power cord

- The provided AC power cord for this unit has certain one-way direction connections to prevent electric shock. Refer to the illustration above for correct connection.

CAUTIONS:

1. ONLY USE WITH JVC POWER CORD PROVIDED WITH THIS UNIT TO AVOID MALFUNCTION OR DAMAGE TO THE UNIT. REMOVE BATTERIES WHEN USING THE POWER CORD.
2. BE SURE TO UNPLUG THE POWER CORD FROM THE OUTLET WHEN GOING OUT OR WHEN THE UNIT IS NOT IN USE FOR AN EXTENDED PERIOD OF TIME.

B. Batteries for memory back-up system

Batteries for preset station memory

It is recommended that batteries are loaded to prevent the preset station memory from being erased when there is a power failure, or when the AC power cord is disconnected.

• Loading batteries

Load three "AA" size batteries (optional) into the battery compartment.

- When removing the batteries, push from the bottom as shown by the arrow.

Notes:

- The three "AA" size batteries supply the power to the memory back-up system which prevents the contents of memory being lost when there is a power failure, or the AC power cord is disconnected. Battery power is not consumed when the AC power cord is connected to the household AC outlet.

- When the AC power cord is not connected, the batteries should be replaced with new ones approximately every three months.

C. Operation on batteries

• Loading batteries

1. Open the battery cover by pulling it toward you while pressing the sections marked by the arrows.
2. Insert eight "D" size batteries as shown in the diagram.
* Be careful to insert the batteries with the ⊕ and ⊖ terminals positioned correctly.
3. Replace the cover.

Checking batteries

When the tape speed or output sound decreases, or CD playback is intermittent, replace all batteries with fresh ones. When making an important recording, use new batteries (preferably alkaline batteries with a longer service life) to avoid any possible failure.

• For better battery usage

Continuous operation of the unit causes the battery power to be consumed quicker than noncontinuous operation. Operation of the unit in a cold place causes the battery power to be consumed more quickly than in a warm place.

CAUTIONS:

- WHEN NOT USING THE UNIT FOR A LONG TIME (MORE THAN TWO WEEKS) OR WHEN ALWAYS USING HOUSEHOLD AC, REMOVE THE BATTERIES TO AVOID A MALFUNCTION OR DAMAGE TO THE UNIT.
- WHEN THE JVC POWER CORD PROVIDED WITH THIS UNIT IS CONNECTED, THE POWER IS AUTOMATICALLY SWITCHED FROM THE BATTERIES TO THE HOUSEHOLD AC EVEN WHEN THE BATTERIES ARE LOADED. HOWEVER, REMOVE THE BATTERIES WHEN USING THE POWER CORD.

CAUTIONS WHEN USING BATTERIES:

When batteries are used incorrectly, it may result in the leakage of chemicals from the batteries or they may explode. The following care should be taken;

- Check that the positive ⊕ and negative ⊖ terminals of the batteries are positioned correctly and load them as shown in the diagram.
- Do not mix new and old batteries together, or mix different types of batteries.
- Do not try to recharge non-rechargeable batteries.
- Remove the batteries when the unit is not to be used for an extended period of time.

If chemicals from the batteries come in contact with your skin, wash them off immediately with water. If chemicals leak onto the unit, clean the unit completely.

6. Location of Main Parts

Fig. 6-1

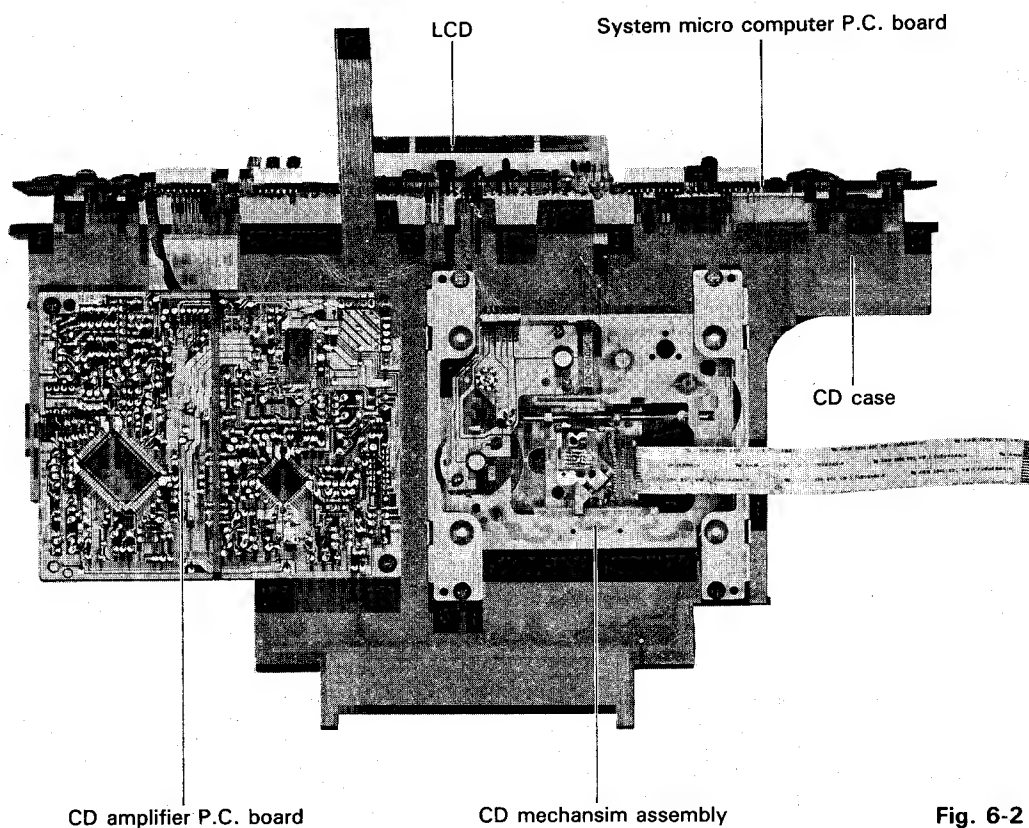

Fig. 6-2

7. Removal of Main Parts

■ Front Cabinet Assembly (refer to Fig. 7-1, 7-2)

1. Remove the six screws ① retaining the rear cabinet assembly of the body.
2. Remove the two screws ② retaining both sides of the front cabinet assembly.
3. Press the STOP/EJECT buttons on both decks A and B and open the cassette door.
4. Turn the front cabinet upward and dismount the front cabinet assembly from the body.

Fig. 7-1

■ CD Player Assembly (refer to Fig. 7-3, 7-4)

1. Turn the body backward and remove the two screws ③ retaining the CD player assembly.
2. After putting the hand onto the right and left back sidea (A), (B) of the CD case retaining the system microcomputer P.C. board, draw out and dismount the case to the front side.

(Then, the connector CN303, CN304, CN305 and CN306 on the main P.C. board, and the connectors CN801, CN802, CN803 and CN804 on the system microcomputer P.C. board will be disconnected).

3. From the connector CN302 on the main amplifier P.C. board, disconnect the 5 PIN parallel wire outgoing from the connector FW501 on the CD amplifier P.C. board.

Fig. 7-2

■ System Micro Computer P.C. Board (refer to Fig. 7-4)

1. Remove the six screws ④ retaining the system micro computer P.C. board from the CD player assembly.
2. From the connector CN805 on the system micro computer P.C. board, disconnect the parallel wire outgoing from the connector CN601 on the CD amplifier P.C. board.
3. From the connector CN806 on the system micro-computer P.C. board, disconnect the # 2 PIN parallel wire outgoing from the CD door close switch P.C. board.

Fig. 7-3

Fig. 7-4

■ CD Amplifier P.C. Board (refer to Fig. 7-5)

1. Remove the three screws (5) retaining the CD amplifier P.C. board from the CD player chassis.
2. From the connector P011 on the CD mechanism P.C. board, disconnect the 6 PIN connector outgoing from connector CN501 on the CD amplifier P.C. board.
3. From the connector CN501 on the CD amplifier P.C. board, remove the parallel wire outgoing from the CD pickup P.C. board.
4. Remove the screw (7) retaining the CD door close switch P.C. board.

■ CD Mechanism Assembly (refer to Fig. 7-5)

- Remove the four screws (6) retaining the CD mechanism assembly.

Fig. 7-5

■ Cassette Mechanism Assembly (refer to Fig. 7-6)

1. Remove the four screws (8) retaining the cassette mechanism assembly.
2. From the connector CNA31 on the main P.C. board, disconnect the 3 PIN connector outgoing from the play head of the cassette mechanism B.
3. From the connector CNA32 on the main amplifier P.C. board, disconnect the 2 PIN and 5 PIN connectors outgoing from the Record/Play head of the cassette mechanism A.
4. From the connector CNA36 on the main amplifier P.C. board, disconnect the 4 PIN parallel wire outgoing from the drive motor.

Fig. 7-6

■ Main Amplifier P.C. Board (refer to Fig. 7-7 ~ 7-10)

1. Remove the four screws (9), (10) retaining the main amplifier P.C. board.
2. From the test point TP1 on the main amplifier P.C. board, pull out the antenna wire outgoing from the rod antenna.

Fig. 7-8

Fig. 7-7

Fig. 7-10

3. Remove the screw (11) retaining the [+] battery contact P.C. board.
4. After turning back the body, dismount the battery cover. Next, remove the claw B retaining the [-] battery contact P.C. board, and draw it out to the front side (refer to Fig. 7-10).
5. Draw out the [-] and [+] battery contact P.C. boards together at the same time.

■ Heat Sink (refer to Fig. 7-11)

1. Remove the three screws (12) retaining the IC101 and Q902, Q921 from the heat sink.
2. Remove the heat sink from the main P.C. board.

Fig. 7-11

8. Analytic Drawing and Parts List

9. Main Adjustments

■ Test Instruments required for adjustment

1. Low frequency oscillator
(oscillation frequency: 50Hz to 20kHz)
(Output : 0 dBs with 60 Ω terminator)
2. Attenuator(Impedance : 600 Ω)
3. Test Tapes
VTT703L.....Head azimuth(10kHz)
VTT712 Tape speed & wow flutter(3kHz)
VTT739 Playback output level & frequency
response (1kHz)
4. Electronic voltmeter
5. Resistor...600 Ω for attenuator matching
6. Distortion meter
7. Torque gauge Cassette type for CTG — N
mechanism adjustment
8. Wow and Flutter meter
9. Frequency counter
10. Test tape for REC/PBNormal tape : UR(TMT7088)

■ Measuring conditions (Amplifier section)

Supply voltage:..... AC 120V(60Hz)
Battery DC : 12V
Back up battery : 4.5V

Reference output : Speaker 0 dBs (0.775V) / 3 Ω
: Headphone 0dBs(0.775V)/ 32 Ω

● Standard position of functionswitches

Function switch TAPE
Tape select switch NORMAL
Multi — bass horn OFF
BASS/TREBLE CENTER
Volume level..... 13
Mode switch STEREO
Reference input level.....Test point CN301 : — 18 dBs
For REC/PB, Check &measuring input use
CN301 — 18.0 dBs (Component side)

CN301: Connector

Output for measuring unless otherwise specified

At headphone J301 with dummy load 32 Ω

BIAS oscillation frequency 101.0kHz \pm 150Hz at FM

(The tape select switch to NORMAL.)

Standard frequency for alignment and measurement as a general specification is 1 kHz, but unless otherwise specified.

Note : When measuring at headphone output, sound from speaker output should be automatically cut off.

■ Measuring condition (Radio section)

Reference output Speaker : 20mW(0.245V) / 3 Ω
AM frequency 400Hz modulation 30%
FM frequency 400Hz modulation
frequency deviation 22.5kHz

● Standard position of switches and controllers

Function..... RADIO
Mode STEREO
Equalizer frequency CENTER
Multi bass horn OFF

● Careful points for adjustment

1. Connect 30 pF capacitor and 33 k Ω resistor to the output side of the IF sweeper in series while 0.082 μ F capacitor and 1000k Ω resistor to the input side in series.
2. Set output level of the IF sweeper as minimum as adjustable.

Mechanism & Amplifier Sections

Item	Conditions	Adjustment & Confirmation Methods	Stand. values	Adjust
Head azimuth adjustment	Test tape :VTT703L (10 kHz) Test point :Headphone (Dummy load 32 Ω)	Play test tape VTT703L(10kHz) and adjust the head azimuth so that output level is maximum and phase discrepancy is minimum between the two channels.	Output :maximum Phase difference :minimum	Head adjusting screw
Tape speed adjustment	Test tape : VTT712(3kHz) Test point : Headphone (Dummy load 32 Ω)	Play test tape VTT712 (3kHz) and near the end position. Should the following tape speed is out of specification, it is necessary to adjust the speed controller (external /semiifixed resistor).	Normal speed : 3010 ± 80 Hz High speed : 5400 ± 400 Hz	VRA61
Wow and flutter check	Test tape :VTT712(3kHz) Test point :Headphone (Dummy load 32 Ω)	Play test tape VTT712(3kHz) to tape start, middle and end position. Wow and flutter should be within the following allowance at the three positions.	Playback should be Within 0.4% (JIS RMS)	—
Playback output level check	Test tape :VTT739(1kHz) Test point : Speaker out (Dummy load 3 Ω)	1. Play test tape VTT739(1kHz) and switch the tape select to Metal position. The playback output level should be within -3 ± 3 dB. 2. L, R difference level to be within ± 3 dB.	Within -3 ± 3 dB Within ± 3 dB	—
Playback Frequency response check	Test tape :VTT739 (1kHz//10kHz) Test point : Speaker out (Dummy load 3 Ω)	Switch tape select to Normal position and volume at maximum level of 25 position. Play test tape VTT739 then compare the level between 1 kHz and 10 kHz. Then defference level should be within $0\text{dB} \pm 3$ dB.	Difference of 10 kHz level from 1 kHz level : within 0 ± 3 dB	—

- NOTES
1. VOLTAGES ARE DC-MEASURED WITH A DIGITAL VOLT METER IN PLAYBACK
 2. UNLESS OTHERWISE SPECIFIED, RESISTORS ARE 1/6W ±5% CARBON RESISTOR.
ALL RESISTANCE VALUES ARE IN Ω(M)G.
 3. ALL CAPACITORS ARE CERAMIC CAPACITOR OR MYLAR CAPACITOR.
ALL CAPACITANCE VALUES ARE IN μ(F)(p)(F).
 4. ALL INDUCTANCE VALUES ARE IN m(H)(mH).
 5. ALL E-CAPACITORS ARE SHOWN IN THE FORM OF CAPACITANCE (μF)/RATED VOLTAGE (V).
- (F) UNFLAMMABLE CARBON RESISTOR
 (M) METAL FILM RESISTOR
 (O) OXIDE METAL FILM RESISTOR
 (L) 120% LOW LEAK CURRENT ELECTROLYTIC CAPACITOR
 (N) NON-POLARISED ELECTROLYTIC CAPACITOR
